Abstract

ExpenseHub: Budget Management System is a web-based application developed to simplify personal financial management and help users maintain organized records of their daily transactions. The system allows users to record income and expenses along with details such as amount, date, category, payment method, and description. It provides a centralized view of financial activities, making it easier to review transactions and understand overall spending. The application also calculates total income, total expenses, and the available balance automatically, reducing the effort required for manual calculations and record keeping.

ExpenseHub also focuses on effective budget management by allowing users to define spending limits for different categories and monitor their progress. Users can identify their spending patterns and keep track of whether their expenses remain within the planned limits. The system aims to provide a simple and organized approach to managing personal finances while demonstrating concepts related to software engineering, web development, database management, and data visualization.
